DPU-1 Drum Tap

PART NUMBER	DRUM SUITABILITY
CT-DPU-1	15, 20, and 25 Litre Plastic Cubes

PRODUCT DESCRIPTION

Chemtools® DPU-1 Drum Tap fits most Plastic Cube drums sized between 15 and 25 Litres. It installs easily and produces a fast, smooth flow, best suiting drums which are required to dispense smaller quantities of liquids quickly.

The tap handle provides the security of a fast, no leak, shut-off valve, and is designed to ensure better grip for a more controlled motion whilst using the tap. Its polyethylene body is extremely hard-wearing and long-lasting with broad chemical compatibility.

INSTALLATION

Lay the drum on its back with the bung facing upwards. If the drum is filled with liquid, raise the bottom end with a low wedge to tilt its contents towards the top end and away from the bung, ensuring no spillage after opening. Using a bung spanner, unscrew the bung, turning anti-clockwise.

Ensure the Drum Tap is in the Off/Closed position and insert it into the container, with the pouring end facing downwards towards the bottom of the drum.

Screw the tap in a clockwise direction as tight as possible and ensure it is sitting firm before moving the container upright again. The drum will now be ready for dispensing.

DISCLAIMER

Chemtools® has made every effort to ensure the information provided in this Technical Data Sheet is accurate at the time of publication. Chemtools® expressly recommends that the user make his/her own assessment to determine the suitability of the product for its intended purpose prior to application. Chemtools shall not be responsible for loss, damage, or injury, resulting from the reliance upon, or failure to adhere to, any recommendations or information contained herein; nor from abnormal use of the material; nor from any hazard inherent in the nature of the material.
